2017 Consumer Confidence Report for Public Water System CONSOLIDATED WSC LATEXO CITY PLANT Y A

This is your water quality report for January 1 to December 31, 2017

CONSOLIDATED WSC LATEXO CITY PLANT Y A provides surface water from Houston County Lake located in Houston County, Texas.

Definitions and Abbreviations

Action Level:Cenconcentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.Action Level Goal (ALG):Televel of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.Are:Regulatory compliance with some MCLs are based on running annual average of monthly samples.I cele 1 Assessment:Rele 1 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why at Cell MCL who allow of the water system to identify potential problems and determine (if possible) why at Cell MCL who allow of the water system to identify potential problems and determine (if possible) why at Cell MCL who allow of the water system to identify potential problems and determine (if possible) why at Cell MCL who allow of the water system to identify potential problems and determine (if possible) why at Cell MCL who allow of the water system to identify potential problems and determine (if possible) why at Cell MCL who allow of the water system to identify potential problems and determine (if possible) why at Cell MCL who allow of the water system to identify potential problems and determine (if possible) why at Cell MCL who allow of the water system to identify possible) why at Cell MCL who allow of the water system to identify possible why at Cell MCL who allow of the water system to identify possible who allow of the water system to identify possible who allow of the water system to identify possible) who allow of the system system to identify possible who allow of the water system to identify the system system to identify and the system system to identify	Definitions and Abbreviations	The following tables contain scientific terms and measures, some of which may require explanation.
Avg:Regulatory compliance with some MCLs are based on running annual average of monthly samples.Level 1 Assessment:A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.Maximum Contaminant Level Goal or MCLG:The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.Maximum residual disinfectant level or MRDL:The highest level of a contaminant in drinking water. There is no known or expected risk to health. MCLGs allow for a margin of safety.Maximum residual disinfectant level goal or MRDL:The highest level of a disinfectant allowed in drinking water. There is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control in incrobal contaminants.MFL:merm:million fibers per liter (a measure of fadiation absorbed by the body)nare:not applicable.NL:poplicable:million grape prilter (a measure of radiation absorbed by the body)nare:not applicable:prol:million sper liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppp:milligrams per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppr:parts per quadrillion, or p	Action Level:	The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Level 1 Assessment:A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.Level 2 Assessment:A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred manual coliform bacteria have been found in our water system on multible occasions.Maximum Contaminant Level or MCL:The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs allow for a margin of safety.Maximum contaminant Level Goal or MCLG:The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.Maximum residual disinfectant level goal or MRDG:The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.MAXIMUM residual disinfectant level goal or MRDG:The highest level of a disinfectant blow which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.MFL:million fibers per liter (a measure of asbestos)nrem:not applicable.NTU:not applicable.NTU:not applicable.prof.picouries per liter or parts per valifion - or one ounce in 7,350,000 gallons of water.ppm:nicrograms per liter or parts per publico - or one ounce in 7,350,000 gallons of water.ppm:ppr:parts per quadrillion, or picograms per liter (pg/L)ppr:pprts per trillion	Action Level Goal (ALG):	The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.
Number of the set of the set of the set of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total collor mater system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total collor mater system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total collor mater system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total collor mater system and univer system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total collor mater is and on water system on multiple occasions.Maximum Contaminant Level or MCLG:The level of a contaminant in drinking water. MCLs are set as close to the MCLGs allow for a margin of safety.Maximum residual disinfectant level or MRDL:The level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.Maximum residual disinfectant level or MRDL:The level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.MFL:million fibers per liter (a measure of rabestos)Intermine:million fibers per liter (a measure of rabestoe) by the body)na:not applicable.Intermine:million fibers per liter (a measure of radioativity)pic/Li:million ger apper liter (a measure of radioativity)pic/Li:million ger apper per liter (a measure of radioativity)pic/Li:million ger apper per liter (applicable)	Avg:	Regulatory compliance with some MCLs are based on running annual average of monthly samples.
and/or why total coliform bacteria have been found in our water system on multiple occasions.Maximum Contaminant Level or MCL:The highest level of a contaminant that is allowed in drinking water. MCLS are set as close to the MCLGs allow for a margin of safety.Maximum Contaminant Level Goal or MCLG:The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.Maximum residual disinfectant level goal or MRDL:The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.Maximum residual disinfectant level goal or MRDL:The level of a disinfectant allowed in drinking water. There is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.Maximum residual disinfectant level goal or MRDL:The level of a disinfectant allowed in drinking water. There is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.MEL:million fibers per liter (a measure of radiation absorbed by the body)name:nat applicable.NTU:not applicable.pC/L:picouries per liter (a measure of radiactivity)ppb:micouries per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppm:milligrams per liter or parts per million - or one ounce in 7,350,000 gallons of water.ppq:ppt: trillion, or picograms per liter (pg/L)ppt:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per trillion, or	Level 1 Assessment:	
Maximum Contaminant Level Goal or MCLG:The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.Maximum residual disinfectant level or MRDL:The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.Maximum residual disinfectant level goal or MRDC:The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.MFL:million fibers per liter (a measure of asbestos)mrem:millierms per year (a measure of radiation absorbed by the body)na:not applicable.NTU:nephelometric turbidity units (a measure of turbidity)pC/L:piccuries per liter (a measure of radiactivity)ppb:micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppm:milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.ppt:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per utillion, or nanograms per liter (ng/L)	Level 2 Assessment:	
Maximum residual disinfectant level or MRDL:The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.Maximum residual disinfectant level goal or MRDLG:The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.MFL:million fibers per liter (a measure of adbestos)mrem:milliems per year (a measure of radiation absorbed by the body)na:not applicable.NTU:nephelometric turbidity units (a measure of turbidity)pc/L1:picocuries per liter (a measure of radiactivity)ppb:micograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppq:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per quadrillion, or nanograms per liter (ng/L)	Maximum Contaminant Level or MCL:	The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
InstrumeContaminants.Maximum residual disinfectant level goal or MRDLG:The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.MFL:million fibers per liter (a measure of asbestos)mrem:milliems per year (a measure of radiation absorbed by the body)na:not applicable.NTU:not applicable.pCi/L:picocuries per liter (a measure of radiactivity)pbp:micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppm:milligrams per liter or parts per billion - or one ounce in 7,350 gallons of water.ppq:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per quadrillion, or nanograms per liter (ng/L)ppt:parts per trillion, or nanograms per liter (ng/L)	Maximum Contaminant Level Goal or MCLG:	The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
control microbial contaminants.MFL:million fibers per liter (a measure of asbestos)mrem:millirems per year (a measure of radiation absorbed by the body)na:not applicable.NTU:nephelometric turbidity units (a measure of turbidity)pCi/L:picocuries per liter (a measure of radiactivity)ppb:micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppq:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per quadrillion, or nanograms per liter (ng/L)	Maximum residual disinfectant level or MRDL:	
mrem:millirems per year (a measure of radiation absorbed by the body)na:not applicable.NTU:nephelometric turbidity units (a measure of turbidity)pCi/L:picocuries per liter (a measure of radioactivity)ppb:micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppq:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per trillion, or nanograms per liter (ng/L)	Maximum residual disinfectant level goal or MRDLG:	
na:not applicable.NTU:nephelometric turbidity units (a measure of turbidity)pCi/L:picocuries per liter (a measure of radioactivity)ppb:micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppm:milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.ppq:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per trillion, or nanograms per liter (ng/L)	MFL:	million fibers per liter (a measure of asbestos)
NTU:nephelometric turbidity units (a measure of turbidity)pCi/L:picocuries per liter (a measure of radioactivity)ppb:micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppm:milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.ppq:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per trillion, or nanograms per liter (ng/L)	mrem:	millirems per year (a measure of radiation absorbed by the body)
pCi/L:picocuries per liter (a measure of radioactivity)ppb:micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppm:milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.ppq:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per trillion, or nanograms per liter (ng/L)	na:	not applicable.
ppb:micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.ppm:milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.ppq:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per trillion, or nanograms per liter (ng/L)	NTU:	nephelometric turbidity units (a measure of turbidity)
ppm:milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.ppq:parts per quadrillion, or picograms per liter (pg/L)ppt:parts per trillion, or nanograms per liter (ng/L)	pCi/L:	picocuries per liter (a measure of radioactivity)
ppq: parts per quadrillion, or picograms per liter (pg/L) ppt: parts per trillion, or nanograms per liter (ng/L)	ppb:	micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.
ppt: parts per trillion, or nanograms per liter (ng/L)	ppm:	milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.
	ppq:	parts per quadrillion, or picograms per liter (pg/L)
Treatment technique or TT: A required process intended to reduce the level of a contaminant in drinking water.	ppt:	parts per trillion, or nanograms per liter (ng/L)
	Treatment technique or TT:	A required process intended to reduce the level of a contaminant in drinking water.

Information about your Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.

- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.

- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Information about Source Water

CONSOLIDATED WSC LATEXO CITY PLANT Y A purchases water from HOUSTON COUNTY WCID 1. HOUSTON COUNTY WCID 1 provides surface water from Houston County Lake located in Houston County, Texas.

No Source Water Assessment for your drinking water source(s) has been conducted by the TCEQ for your water system. The report describes the susceptibility and the types of constituents that may come into contact with your drinking water source based on human activities and natural conditions. The information in this assessment allows us to focus our source water protection strategies.

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	07/29/2016	1.3	1.3	0.04	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Lead	07/29/2016	0	15	0	0	ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits.

2017 Water Quality Test Results

Disinfection By-Products	Collection Date	Highest Level or Average Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Haloacetic Acids (HAA5)	2017	48	14.1 – 53	No goal for the total	60	ppb	Ν	By-product of drinking water disinfection.

'* The value in the Highest Level or Average Detected column is the highest average of all HAA5 sample results collected at a location over a year'

Total Trihalomethanes (TTHM)	2017	80	37.3 - 66.7	No goal for the total	80	ppb	N	By-product of drinking water disinfection.

'* The value in the Highest Level or Average Detected column is the highest average of all TTHM sample results collected at a location over a year'

Inorganic Contaminants	Collection Date	Highest Level or Average Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Nitrate [measured as Nitrogen]	2017	0.224	0.182 - 0.224	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.

Disinfectant Residual

Disinfectant Residual	Year	Average Level	Range of Levels Detected	MRDL	MRDLG	Unit of Measure	Violation (Y/N)	Source in Drinking Water
Chloramine	2017	1.55	0.00 - 3.00	4	4	ppm	Ν	Water additive used to control microbes.
